MUHAMMAD HASSAN

Full Stack MERN Developer

muhammadhassan2326@gmail.com | +92 311 1527433 | LinkedIn | GitHub | Portfolio

PROFESSIONAL PROFILE

Full-stack MERN developer (React, Next.js, Node.js, Express, MongoDB, TypeScript) with a track record of shipping AI-powered SaaS products end to end, covering authentication, payment infrastructure, LLM integration, and deployment. Currently working as an Oracle APEX Developer on Invenzra, a live production inventory management platform, delivering interactive reporting and PL/SQL workflow automation. Comfortable owning a product from database schema to production, in environments where reliability and data accuracy matter.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, SQL, C++, HTML5, CSS3
Frontend	React.js, Next.js, Tailwind CSS, Vite, Monaco Editor, Redux / Context API
Backend & APIs	Node.js, Express.js, NestJS, Flask, RESTful APIs, WebSockets (Socket.IO)
Databases	MongoDB (Mongoose), PostgreSQL, Supabase, Oracle SQL
AI & Automation	LLM integration, retrieval with citation grounding, prompt engineering, workflow automation
DevOps & Tools	Docker, Git, GitHub, Vercel, Stripe, Gunicorn, Zod, Postman, Linux
Enterprise	Oracle APEX, PL/SQL, Oracle SQL 19c, interactive reports, workflow automation

WORK EXPERIENCE

Oracle APEX Developer | Invenzra — Aug 2026 – Present

invenzra.com · Islamabad, Pakistan (On-site)

- Developing Invenzra, a stock and inventory management platform on Oracle APEX running in live production.
- Build interactive forms and reporting covering stock and inventory operations across the application.
- Implement PL/SQL workflow automation, data processing, validation, and scheduled business routines.

Full Stack Developer (Freelance) | Upwork & Fiverr — Jan 2025 – Present

Remote

- Architect and ship custom web applications, SaaS MVPs, and admin dashboards for international clients.
- Deliver complete products independently: authentication, payment infrastructure, AI features, deployment, and handover.

PROJECTS

DOCYRA — Multi-Tenant AI Policy Assistant

React, Node.js, AI/LLM integration, Vite | Live | GitHub

- Enables companies to upload HR and IT policy documents so employees can query them in plain language and get instant answers.
- Every answer is grounded in and cited from the source documents; the system reports when an answer is not present rather than inventing one.

ContentForge AI — AI SaaS Platform

Next.js, Supabase, Stripe, AI/LLM, Tailwind CSS | Live | GitHub

- Complete AI SaaS product built and deployed end to end.
- Authentication via email/password and Google OAuth with row-level security enforced on every database table.
- Live Stripe subscription billing with a usage-tracked free tier and a functional upgrade flow.

RelaySync — Real-Time Collaborative Code Editor

TypeScript, React, Node.js, Socket.IO, Yjs, MongoDB, Docker | GitHub

- Multi-user simultaneous editing on Monaco Editor and Yjs CRDTs for conflict-free synchronisation with live cursor tracking.
- Express and Socket.IO server handling room awareness and debounced MongoDB persistence.

ACHIEVEMENTS & CERTIFICATIONS

Islamabad Hack 2026 — Certificate of Appreciation (Participant) — Oct 2026

Young Minds Forum · Barani Institute of Information Technology (BIIT) · YES Pakistan · Rawalpindi

- Built **VoiceBridge** with a team in one day (Community & Society track): an AI voice agent that helps people who cannot read use online services, completing tasks on real websites from spoken instructions.
- Supports 7 regional languages, asks permission before acting on any website, requires PIN-protected family approval before payments, and detects scam messages.

EDUCATION

BS Computer Science (5th Semester, In Progress) — 2026 – Present

Iqra University, Islamabad, Pakistan

Associate Degree in Computer Science (ADCS) — Completed

Air University, Islamabad, Pakistan
